

i3SYNC Touch

World's first wireless touch solution

Sharing a presentation on the big screen seems easy enough, but in practice it's often not easy. If you have managed to set up a connection, it doesn't mean you're there, because you still have to find the appropriate screen resolution. Fortunately, you can use this wireless touch solution to avoid this chaotic state. It's simply a matter of connecting a transmitter and receiver.

Wireless connection

i3SYNC Touch is a wireless solution that keeps your meeting space clean and organized. A wireless solution implies no cables to contend with. The tool consists of a transmitter and receiver which can communicate wirelessly. You connect the transmitter to your laptop (or another HDMI compatible device) and the receiver to the presentation screen. They synchronize instantly, even without internet connection. Once they're paired, your mobile device is connected to the presentation screen.

Plug and play

The tool does not require any installation. With one push on the button, you instantly share the screen of your mobile device on the presentation screen. Every participant can connect a unique transmitter to his mobile device. This way, they can share

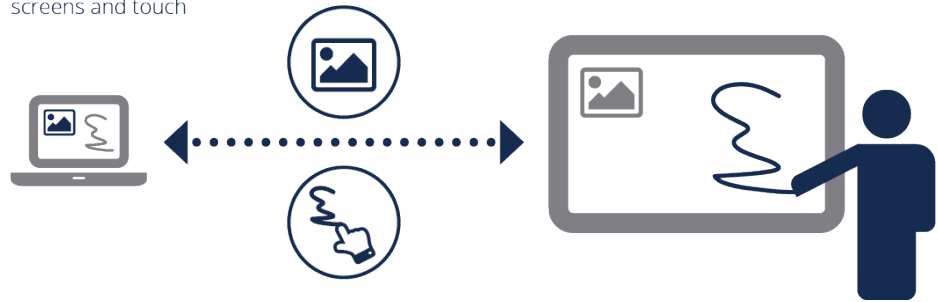

their screen in turns, which strongly promotes collaboration and flexibility in the meeting room. Those who are connected to the shared screen, can preview the connected devices on the presentation screen and lock specific transmitters, if necessary.

i3SYNC Touch

Wireless sharing of screens and touch

Interactive screen sharing

The wireless tool is equipped with a touch functionality that makes the big screen interactive during screen sharing. This means you can interact directly with what's displayed on the big screen. This allows you to quickly browse through the slides of your presentation without using an external remote. In addition, you can mark specific parts in your presentation or quickly open other applications. Simply use the big screen as if it were your small mobile screen.
